

Seedling Care

Seedling trays, sprouting trays, is ideal for starting seeds and transplanting seedling, suitable for both manual and automatic planting. There are variety sizes of the length, width, depth and many different shapes and quantities of cells, to meet your various seedling needs, they are easy to use and remove, durable and reusable. The material is durable, Eco-friendly, heat-resistance, anti-corrosion. And these plant trays are used for propagating flowers, vegetables, and other plant from seeds in greenhouse.

Seedling Heat Mat can increase the success of seedling and cutting, it warms rooting 10-20 F over ambient temperature, makes seedling grow faster and more safely growing in Winter. The single circuit provides consistent temperature. Waterproof construction retains moisture for optimal safety with CE and RoHS, IP67 proof.

Electric Nursery Propagator is a seed case with heating base, can provide temperature suitable for seed germination, which also increases success of seedling and cutting, makes seedling grow faster, with waterproof construction.

Seedling Trays
